

A LONG NOTE ABOUT PROMAR:

PROMAR is a manufacturer of food additives with its registered office and production plant in Zawiercie. Its products are available on international markets.

For over 35 years, PROMAR has been **cooperating B2B clients**, mainly in the meat, convenience food and snack sectors and other market segments, supplying tailored solutions for food manufacturers. The company develops products in response to market needs - from the concept stage, through testing, right through to the implementation of finished solutions in customers' production facilities.

PROMAR has a large team of experts, which forms one of the cornerstones of the company's operations. It comprises, among others, experts from the product development department, food technologists, product managers, and specialists from the quality department and other areas, who combine **specialist know-how** with long-standing experience in the food industry. Thanks to close collaboration between teams, the company manages projects from start to finish - from the concept stage, through development and testing, right through to the successful implementation of products in customers' production facilities.

With over 35 years of experience, the company has developed robust production processes that ensure consistent quality and a high level of product safety. **Production is carried out in accordance with the international IFS and BRC standards, as well as Halal and Kosher certification requirements.**

Addressing market needs, PROMAR's portfolio comprises complementary product and service lines. The **Promasol line** includes functional additives such as brines, emulsifiers, stabilisers and preservatives, that contribute to the texture, consistency, colour and yield of products. **Promix** comprises coating systems and alginate-based solutions used e.g. in the production of alginate casings. The **Proaroma line** includes spice blends, sauces and marinades that allow you to create unique flavour profiles.

The fourth pillar of our offering is the **Proservis line** focused on services supporting the development of products and technological processes. It provides access to state-of-the-art facilities, including two application kitchens - a demonstration kitchen and a catering kitchen - as well as an application centre where testing and development work is carried out using equipment that replicates clients' production conditions, without the need to involve their own resources. Another key element of this offering is the support provided by the R&D team, which is one of the cornerstones of the company's operations.

In autumn 2026, PROMAR's largest-ever investment project, **with a total value exceeding PLN 100 million, is due to be launched.** Once the project has been fully completed, the company's production capacity will reach 5,000 tonnes per month.

A SHORT NOTE ABOUT PROMAR:

PROMAR is a manufacturer of food additives with its registered office and production plant in Zawiercie. Its products are available on international markets.

For over 35 years, PROMAR has been **cooperating B2B clients**, mainly in the meat, convenience food and snack sectors and more, supplying tailored solutions for food manufacturers. The company develops products in response to market needs - from the concept stage, through testing, right through to the implementation of finished solutions in customers' production facilities.

PROMAR has a team of experts who combine specialist know-how with long-standing experience in the food industry, many of whom have been working with the company for years.

With over 35 years of experience, the company has developed robust production processes that ensure consistent quality and a high level of product safety. Production is carried out in accordance with the international **IFS and BRC standards**, as well as Halal and Kosher certification requirements.

PROMAR is expanding its operations in the Polish and international markets, offering a wide range of solutions for food manufacturers - from functional ingredients and coating systems to sauces, marinades and many other categories. A key element of this offering is the **R&D support** and infrastructure for testing new products - from taste tests to tests conducted under conditions that replicate customers' production processes.

In autumn 2026, PROMAR's largest-ever investment project, **with a total value exceeding PLN 100 million**, is due to be launched. Once the project has been fully completed, the company's production capacity will reach 5,000 tonnes per month.
